Team commutation

Other that meet up's that happened on Mondays and Fridays most weeks we communication by Facebook, email and the readme in git hub. Marcus doesn't use facebook so would email, the emails would be talked about on the group chat and a rely would be sent or talked about at one of the meetings.

Example email-

Facebook thread, examplees

Yeh thats cool, if you just use the existing db classes they should work for admin and driver

So userdao should work for admin

And driverdao for driver

Leaving saturday

Will be in on friday

Trym
I don't really have time to finish everything at the moment. I made separate dao classes for each class, with minor changes based on datafields. Need to finish updating the AddUserServlet and LoginServlet classes with the changes made to the user class. I suggest we meet on Friday.

Trym
Should I upload the unfinished servlet code, or finish it up later then do it?

Depends on whether anyone is going to work on it before Friday or not

Paul
I can do a bit this eve if you upload it?

hey guys, as far a i can see we havnt updates the gnatt chart. ill go thought the messages but if people cans send me what they have done / when roughly I'll update the chart and write up the delivery form.

and we can go though it before the sprint review tomorrow

Darren
cool cool

i've been looking over the code all weekend and i'm working on it for tomorrow

lots of functionality should be ready, I was gonna look t all the other deliverables after

we can do that tomorrow though if you like, i was gonna throw some crap together tonight just to get all the marks but we can look at it tomorrow and change it how we like

i may as well throw together a bare bones one then we something to go off if thats cool
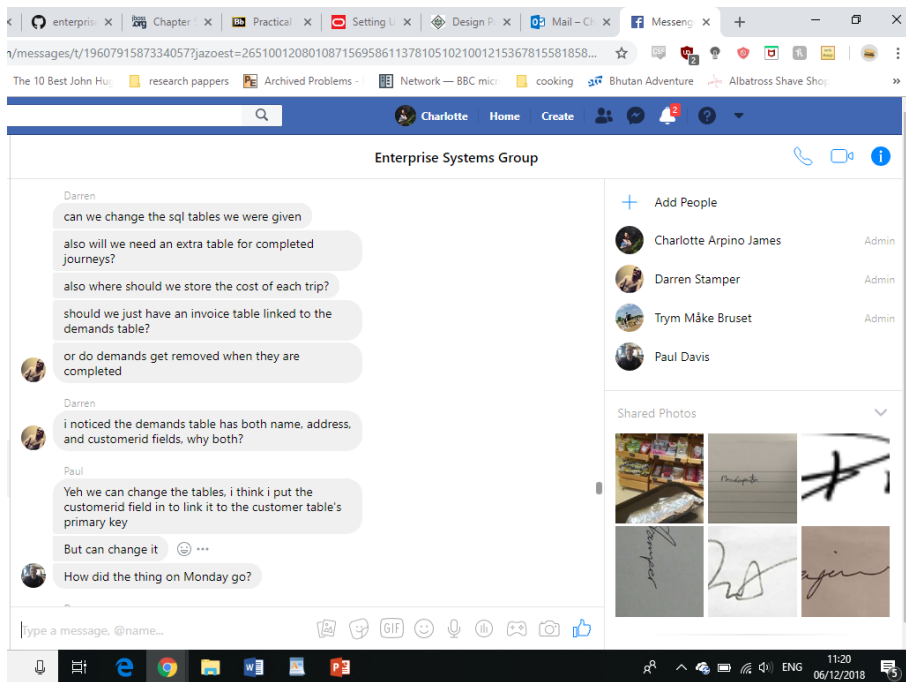

Darren

Github example, from the read me. We also kept a log of what needed to be done and what was working on at the time.

Implementation of a web-based booking system for Alpha-Cab Ltd minicab company.

use cases to implement

- Admin
  - List all drivers (Working)
  - List all customers (Working)
  - Daily report (turnover, no. customers served) (Working)
    - Added `daily_report.jsp` that gets an arraylist of type Journey from servlet and displays in table with total turnover
    - TODO: add date validation in servlet, so that invalid dates cannot be entered
  - List all customers served per day (including: destination, charge)
  - Create invoice (cost, costWithVAT)
  - Change price of destination
  - Assign customer to driver
- Driver
  - List all jobs
- Customer
  - Book (name, address, destination address, date, time,) [if first time add a new customer record, in the case of a guest customer]

I have been working on the Customers functionalities, they can now book a cab and view all of their booking history. Guest customers are now working too. I also got the header to work again and did a bug fix which breaks the login for the users
